

Comments on licensing framework for third generation mobile services

1. Point 2 under 2.2.5 on P5

I disagree on that "selection by merits approach tends to favour incumbent telecommunication operators" because others can also have a fair chance to convince TA.

Subcontracting might imply the main contractor earns extra profit by raising the consumer price.

2. Point 3 under 2.2.5 on P5

I think at least the framework of "3G services and rollout requirements" are known by the time of selection by merits ?

I look forward to your reply on my comments. Please do not disclose my name and email address to the public.
